Bank - An Interprofessional Approach**

Table of Content

I. CARING-BASED NURSING: THE ART
1. Primary Care in the Twenty-First Century: A Circle of Caring
2. Caring and the Advanced Practice Nurse
3. Health Promotion
4. The Art of Diagnosis and Treatment
5. Evidence-Based Practice
II. CARING-BASED NURSING: THE SCIENCE
Section 1. Neurological Problems
6. Common Neurological Complaints
7. Seizure Disorders
8. Degenerative Disorders
9. Cerebrovascular Accident (Stroke)
10. Infectious and Inflammatory Neurological Disorders
Section 2. Skin Problems
11. Common Skin Complaints
12. Parasitic Skin Infestations
13. Fungal Skin Infections
14. Bacterial Skin Infections
15. Viral Skin Infections
16. Dermatitis
17. Skin Lesions
Section 3. Eye Problems
18. Common Eye Complaints
19. Lid and Conjunctival Pathology
20. Visual Disturbances and Impaired Vision
Section 4. Ear, Nose, and Throat Problems
21. Common Ear, Nose, and Throat Complaints
22. Hearing and Balance Disorders
23. Inflammatory and Infectious Disorders of the Ear
24. Inflammatory and Infectious Disorders of the Nose, Sinuses, Mouth, and Throat
25. Epistaxis
26. Temporomandibular Disorders
27. Dysphonia
Section 5. Respiratory Problems
28. Common Respiratory Complaints
29. Sleep Apnea

30. Infectious Respiratory Disorders
31. Inflammatory Respiratory Disorders
32. Lung Cancer
33. Smoking Addiction
Section 6. Cardiovascular Problems
34. Common Cardiovascular Complaints
35. Cardiac and Associated Risk Disorders
36. Dysrhythmias and Valvular Disorders
37. Disorders of the Vascular System
Section 7. Abdominal Problems
38. Common Abdominal Complaints
39. Infectious Gastrointestinal Disorders
40. Gastric and Intestinal Disorders
41. Gallbladder and Pancreatic Disorders
42. Cirrhosis and Liver Failure
Section 8. Renal Problems
43. Common Urinary Complaints
44. Urinary Tract Disorders
45. Kidney and Bladder Disorders
Section 9. Gender-Related Health Problems
46. Common Reproductive System Complaints
47. Breast Disorders
48. Vaginal, Uterine, and Ovarian Disorders
49. Prostate Disorders
50. Penile and Testicular Disorders
51. Sexually Transmitted Infections
Section 10. Musculoskeletal Problems
52. Common Musculoskeletal Complaints
53. Spinal Disorders
54. Soft-Tissue Disorders
55. Osteoarthritis and Osteoporosis
Section 11. Endocrine and Metabolic Problems
56. Common Endocrine and Metabolic Complaints
57. Glandular Disorders
58. Diabetes Mellitus
59. Metabolic Disorders
Section 12. Hematological and Immunological Problems
60. Common Hematological and Immunological Complaints

61. Hematologic Disorders
62. Immunological Disorders
63. Infectious Disorders
Section 13. Psychosocial Problems
64. Common Psychosocial Complaints
65. Substance Use Disorders
66. Schizophrenia Spectrum Disorders
67. Mood Disorders
68. Anxiety, Stress, and Trauma-Related Disorders
69. Obsessive-Compulsive Disorders
70. Behavioral Disorders Related to Physical/Physiological Disturbances
71. Neurodevelopmental Disorders
Section 14. Urgent Care Problems
72. Common Urgent Care Complaints
73. Common Injuries
74. Toxic Exposures
75. Environmental Exposures
III. CARING-BASED NURSING: THE PRACTICE
76. Sports Physicals
77. Primary Care of Older Adults
78. Palliative Care and Pain Management
79. Ethical and Legal Issues of a Caring-Based Practice
80. The Business of Advanced Practice Nursing
81. The 15-Minute Hour: Practical Approaches to Behavioral Health for Primary Care
82. Putting Caring Into Practice: Caring for Self

Interprofessional Approach 5th edition Dunphy Test Bank**

Chapter 1. Primary Care in the Twenty-First Century: A Circle of Caring

1. A nurse has conducted a literature review in an effort to identify the effect of handwashing on the incidence of nosocomial (hospital-acquired) infections in acute care settings. An article presented findings at a level of significance of <0.01 . This indicates that

- A) the control group and the experimental group were more than 99% similar.
- B) the findings of the study have less than 1% chance of being attributable to chance.
- C) the effects of the intervention were nearly zero.
- D) the clinical significance of the findings was less than 1:100.

Ans: B

Feedback: The level of significance is the level at which the researcher believes that the study results most likely represent a nonchance event. A level of significance of <0.01 indicates that there is less than 1% probability that the result is due to chance.

2. A nurse has read a qualitative research study in order to understand the lived experience of parents who have a neonatal loss. Which of the following questions should the nurse prioritize when appraising the results of this study?

- A) How well did the authors capture the personal experiences of these parents?
- B) How well did the authors control for confounding variables that may have affected the findings?
- C) Did the authors use statistical measures that were appropriate to the phenomenon in question?
- D) Were the instruments that the researchers used statistically valid and reliable?

Ans: A

Feedback: Qualitative studies are judged on the basis of how well they capture and convey the subjective experiences of individuals. Statistical measures and variables are not dimensions of a qualitative methodology.

3. A nurse has expressed skepticism to a colleague about the value of nursing research, claiming that nursing research has little relevance to practice. How can the nurse's colleague best defend the importance of nursing research?

- A) The existence of nursing research means that nurses are now able to access federal grant money, something that didnt use to be the case.
- B) Nursing research has allowed the development of masters and doctoral programs and has greatly increased the credibility of the profession.
- C) The growth of nursing research has caused nursing to be viewed as a true profession, rather than simply as a trade or a skill.
- D) The application of nursing research has the potential to improve nursing practice and patient outcomes.

Ans: D

Feedback: The greatest value of nursing research lies in the potential to improve practice and, ultimately, to improve patient outcomes. This supersedes the contributions of nursing research to education programs, grant funding, or the public view of the profession.

4. Tracy is a nurse with a baccalaureate degree who works in the labor and delivery unit of a busy urban hospital. She has noticed that many new mothers abandon breast-feeding their babies when they experience early challenges and wonders what could be done to encourage more women to continue breast-feeding. What role is Tracy most likely to play in a research project that tests an intervention aimed at promoting breast-feeding?

- A) Applying for grant funding for the research project
- B) Posing the clinical problem to one or more nursing researchers
- C) Planning the methodology of the research project
- D) Carrying out the intervention and submitting the results for publication

Ans: B

Feedback: A major role for staff nurses is to identify questions or problems for research. Grant applications, methodological planning, and publication submission are normally carried out by nurses who have advanced degrees in nursing.

5. A patient signed the informed consent form for a drug trial that was explained to patient by a research assistant. Later, the patient admitted to his nurse that he did not understand the research assistants explanation or his own role in the study. How should this patients nurse respond to this revelation?

- A) Explain the research process to the patient in greater detail.
- B) Describe the details of a randomized controlled trial for the patient.

- C) Inform the research assistant that the patients consent is likely invalid.
- D) Explain to the patient that his written consent is now legally binding.

Ans: C

Feedback: Just as the staff nurse is not responsible for medical consent, the staff nurse is not responsible for research consent. If patients who have agreed to participate exhibit ambivalence or uncertainty about participating, do not try to convince them to participate. Ask the person from the research team who is managing consents to speak with concerned patients about the study, even after a patient has signed the consent forms.

Multiple Selection

6. A nurse leader is attempting to increase the awareness of evidence-based practice (EBP) among the nurses on a unit. A nurse who is implementing EBP integrates which of the following? (Select all that apply.)

- A) Interdisciplinary consensus
- B) Nursing tradition
- C) Research studies
- D) Patient preferences and values
- E) Clinical expertise

Ans: C, D, E

Feedback: Fineout-Overholt, Melnyk, Stillwell, and Williamson define EBP as a problem-solving approach to the delivery of healthcare that integrates the best evidence from studies and patient care data with clinician expertise and patient preferences and values.

Multiple Choice

7. Mrs. Mayes is a 73-year-old woman who has a diabetic foot ulcer that has been extremely slow to heal and which now poses a threat of osteomyelitis. The wound care nurse who has been working with Mrs. Mayes applies evidence-based practice (EBP) whenever possible and has proposed the use of maggot therapy to debride necrotic tissue. Mrs. Mayes, however, finds the suggestion repugnant and adamantly opposes this treatment despite the sizable body of evidence supporting it. How should the nurse reconcile Mrs. Mayes views with the principles of EBP?

- A) The nurse should explain that reliable and valid research evidence overrides the patients opinion.
- B) The nurse should explain the evidence to the patient in greater detail.
